CONNECTING THE NEXT GENERATION

*Keeping You In The Loop - February 2025*

## TLC Is Excited About Staffing.

TLC is happy to announce that we are 100% staffed! The many months of focusing on talent acquisition has paid off and we are thrilled to once again have 3 full manufacturing shifts working 5 days a week with overtime on the weekends. We are looking forward to increasing the stock on the shelves along with decreasing lead times.

Being fully staffed also allows TLC to get back to new product development.

**Be on the lookout for new cable offerings in 2025!**

## Ask Engineering

**What TLC products run the fastest and what run the slowest?**

We can answer in 2 areas: For sub components, the fastest product to run would be 900um tight buffer which runs at 300 meters per minute. The slowest would be the armoring (no jacket) of core cables which runs a 6 meters per minute. In regard to finished cables, simplex and duplex runs the fastest at 100mpm and the slowest would be 144 fiber tight buffered distribution cable which runs at 8mpm.
